DETAILED ACTION

1. Claims 1-19 have been presented for examination.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants Admitted Prior Art [AAPA] in view of Stückelberg et al. [Stu] <u>Linux Remote-Boot mini-HOWTO: Configuring Remote-Boot Workstations with Linux, DOS, Windows 95/98 and Windows NT.</u>
- 4. Referring to claim 1, AAPA teaches the remote booting method substantially including:
 - a. executing a BIOS and determining whether to execute a remote boot procedure [¶0008].
 - b. downloading and executing a loader program when the remote boot procedure is executed [¶0010].
 - c. allocating a memory block on the computer and installing a file system in the memory block [¶0011].
 - d. downloading a file to the file system [¶0011].

Although the AAPA teaches the limitations above, it is not explicitly taught that the remote booting method downloads a configuration file, wherein the configuration file comprises

Application/Control Number: 10/709,825

Art Unit: 2115

a size of an allocated memory and a file list and wherein a memory block on the computer is

Page 3

allocated according to the size of the allocated memory.

Stu teaches a batch file (herein interpreted as a configuration file) which comprises a size of an allocated memory and a file list wherein memory is allocated and a file system is installed according to the configuration file [pgs. 14 and 41-42]. It would have been obvious to one of ordinary skill in the art to modify the AAPA to include the teachings of Stu because it would provide a means to boot to a plurality of different operating systems including Windows, DOS, Linux, etc... and would provide a means to appropriately configure the computer in accordance with the particular operating systems.

- 5. Referring to claim 2, the AAPA teaches installing a virtual disk drive according to the file system and booting the computer via the virtual disk drive [¶0010].
- 6. Referring to claim 3, the AAPA teaches the file system comprising a boot sector, file allocation table, a directory and the file [¶0011].
- 7. Referring to claim 4, the AAPA teaches determining whether to execute a remote boot procedure depends on a setting of the BIOS [¶0007].
- 8. Referring to claims 5-6 and 10, these are rejected on the same basis as set forth hereinabove. The AAPA and Stu teach the method and therefore teach the system performing the method.
- 9. Referring to claim 7, the AAPA teaches a network boot device comprising a Boot ROM on a network card [¶0007].
- 10. Referring to claims 8 and 9, the AAPA teaches the boot device comprises a PXE agent and a stand alone system [¶0010].

Application/Control Number: 10/709,825

Page 4

Art Unit: 2115

11. Referring to claims 11-19, these are rejected on the same basis as set forth hereinabove. The AAPA and Stu teach the method and therefore teach the devices performing the method. Furthermore, the AAPA teaches remote booting from a server, which may comprise blade and rack mountable servers [¶0006-0007]. In addition, the examiner is taking official notice that double-CPU servers are well known in the art and it would have been obvious to include the ability to boot from a double-CPU server, in addition to the rack mountable and blade servers, in order make the system more robust by including the ability to boot from additional types of servers.

Conclusion

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Connolly whose telephone number is (571) 272-3666. The examiner can normally be reached on M-F 8AM-5PM (except every first Friday).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas C. Lee can be reached on (571) 272-3667. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
